

# TOUR DE FRANCE ••••• SITA ROBINSON

The Tour de France is a multiple stage bike race primarily held in France and has been running every year since 1903. The race consists of 21 stages and lasts around three weeks. The data was taken from the Tableau Public Datasets ([https://public.tableau.com/s/resources?qt-overview\\_resources=1](https://public.tableau.com/s/resources?qt-overview_resources=1)) and is called Tour de France Statistics. The data has 13 columns and 103 rows. There are no missing values in the dataset.

FIGURE 1

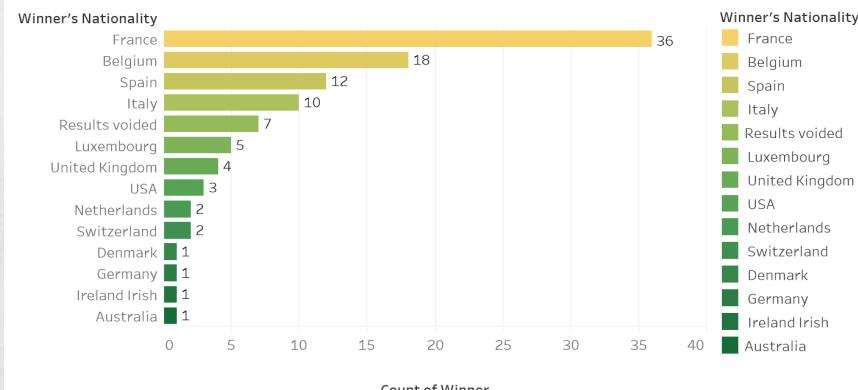

Starting Locations of the Tour De France

Most of the Tour de France starting locations were in different cities in France but in some years the race started in Ireland, Belgium, Netherlands, Spain, Germany, Switzerland, and Luxembourg.

FIGURE 2

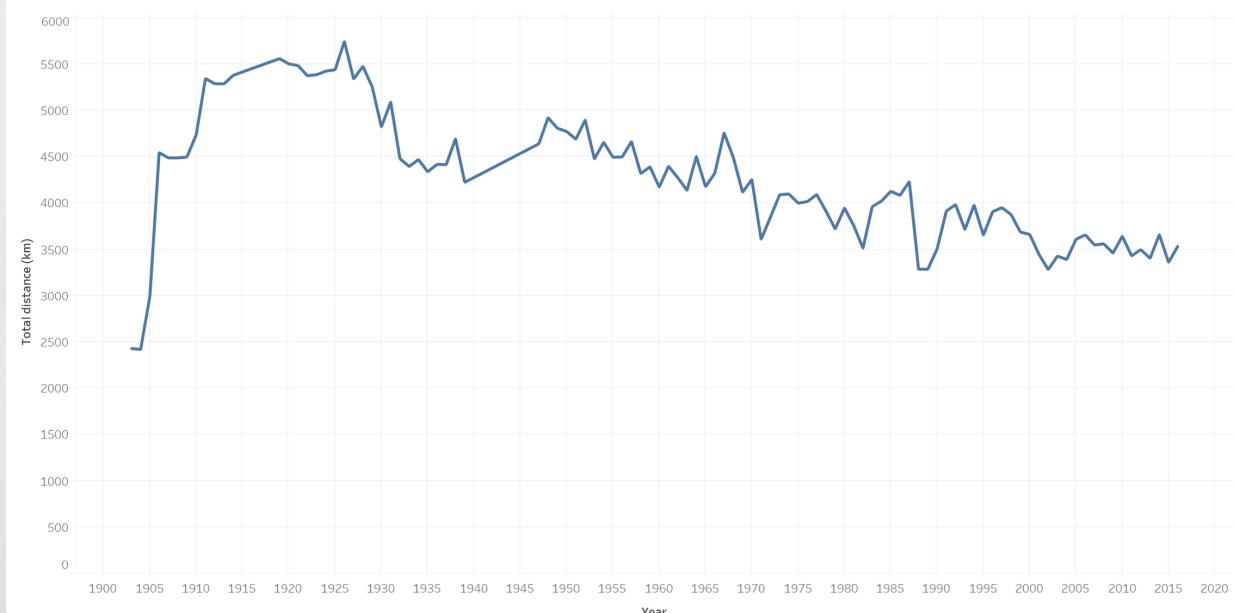

Number of Winners from All Years by Nationality

The most winners over all years from 1903 to 2016 seem to have the nationality of France followed by Belgium and Spain. The least number of winners are from Denmark, Germany, Ireland, and Australia.

FIGURE 3

Total Distance in Tour De France

The distance in kilometers of the Tour De France has been on the decline in recent years. Looking further at the data it seems that while the distance is declining, more people seem to be completing the race.

Through this analysis we learned that even though the Tour De France typically starts in France some years it has started in other places in Europe such as in Ireland, Belgium, Netherlands, Spain, Germany, Switzerland, and Luxembourg. The countries with the most winners by nationality in descending order are France, Belgium, Spain, Italy, Results voided (probably because of doping or other reasons), Luxembourg, United Kingdom, USA, Netherlands, Switzerland, Denmark, Germany, Ireland, and Australia. The total distance in the Tour De France has generally been on a decline in recent years and more people seem to also be finishing the race.
